[Recording 50](#)

B: Logging of circuits

Y: Yes, this part is not a circuit; but this part is.

B: Is a circuit.

Y: You have an asymmetry. And this is what breaks the symmetry of the universe and makes all the phase transitions and all the rest happen. There's five arrows. Y times 2 to be 10. But this one is like this which is a graviton. And this is a circuit that can't be crossed over. And then this one is a circuit that is crossed over and makes electromagnetism. This makes a graviton. And this makes what? It's a three way. It's a triangle.

Punita: You said two is also a circuit.

Y: Yes.

Punita: OK. Can we just define a circuit as any configuration in which an Individual will have direct knowledge of itself?

Darshana: Non-originated direct knowledge

B: Here is the arrow, here?

Y: What? It's an arrow here. And that's an arrow. This one I labeled 'love'. But this is different. If you had this, then it is not love because in this they are both in the state of direct knowledge. And there is no states of no knowledge...

Punita: (acknowledges) **[Recording Time: 00: 02:10]**

Y: ...where this includes states of no knowledge. You can spend hours studying the implications of this simple diagram.

Punita: (acknowledges) I think that is very significant. (Laughs) There's a lot in there.
